DETAILED ACTION

Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Response to Amendment

Allowable Subject Matter

1. Claims 1-7, 9-11, 13-14, 17-22 are allowed.

Independent claims 1 and 9 have been successfully amended and argued to overcome the prior art of record. As such, claims 1 and 9 are allowed. Claims 2-7, 10-11, 13-14, and 17-22 further limit allowed claims 1 and 9 and as such, are too allowed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 16 is rejected under 35 U.S.C. 102(e) as being anticipated by Kraus et al., U.S.

6,587,979.

Art Unit: 2133

As per claim 16:

Kraus in figures 6 and 17 teaches to means for transferring a data signal (12) configured by a first control signal (CNT), means for generating a second control signal (120, 50), means for swapping said data and a test signal (44), generating a third control signal (CONT), means for multiplexing the second and third control signals to generate the first control signal (42), and means for measuring a response of said means for transferring based upon said test signal (52).

As per claim 23:

The response for said means for transmitting of Kraus is a transition response between high and low state values (Fig.6, 17: 52).

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
